

Muzika Studio

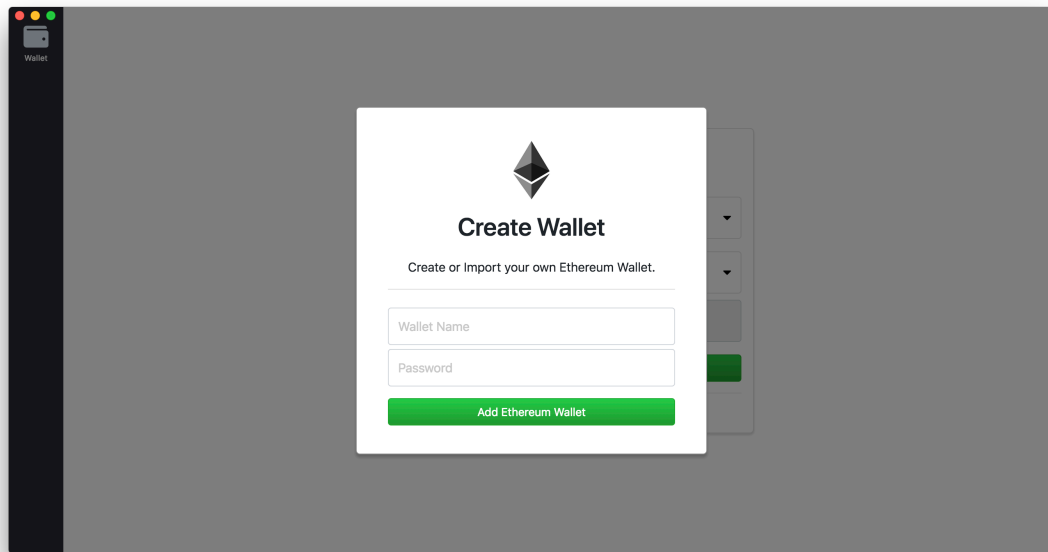

Muzika Studio allows artists to manage their wallets and create Smart Contract for their digital music products, including music sheets and sound sources. The application also provides an intuitive user interface to encrypt and upload the digital products on IPFS – a decentralized file storage system – which will be made available for downloads and streaming when users make purchase in the Muzika Platform.

Muzika Studio now supports Ethereum and Ontology network, and users can choose to login to either Testnet or Mainnet.

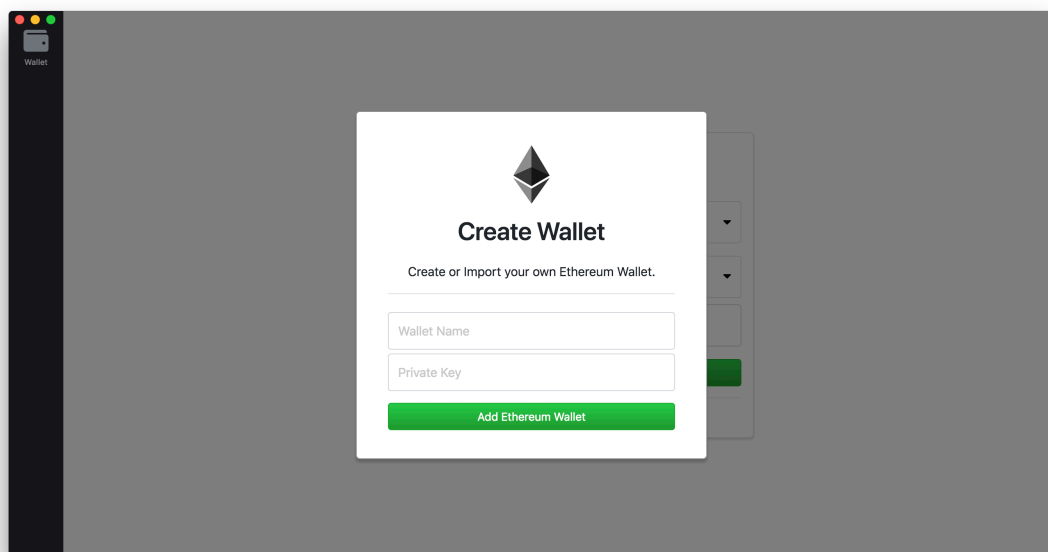

Login Interface

Users can login to the network (Ethereum or Ontology) and create or import a new wallet. When a user makes login, he/she will be asked to sign a temporary message, which will be sent to the server for user verification. We do not save private keys of users in the server.

Create Accounts

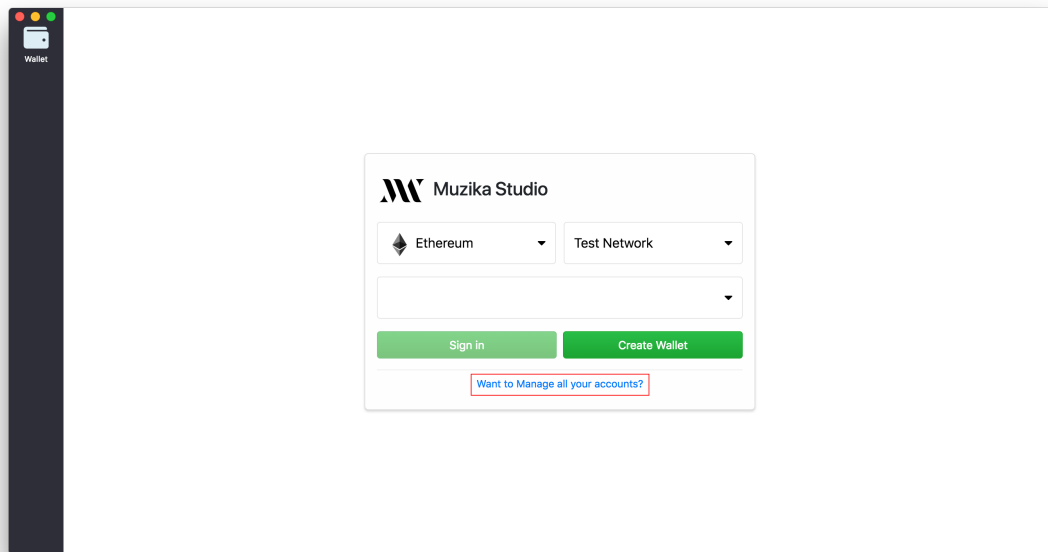

You can create or import a new wallet. You will be asked provide a set of wallet name and password for your account. Password is required because your private key will be encrypted

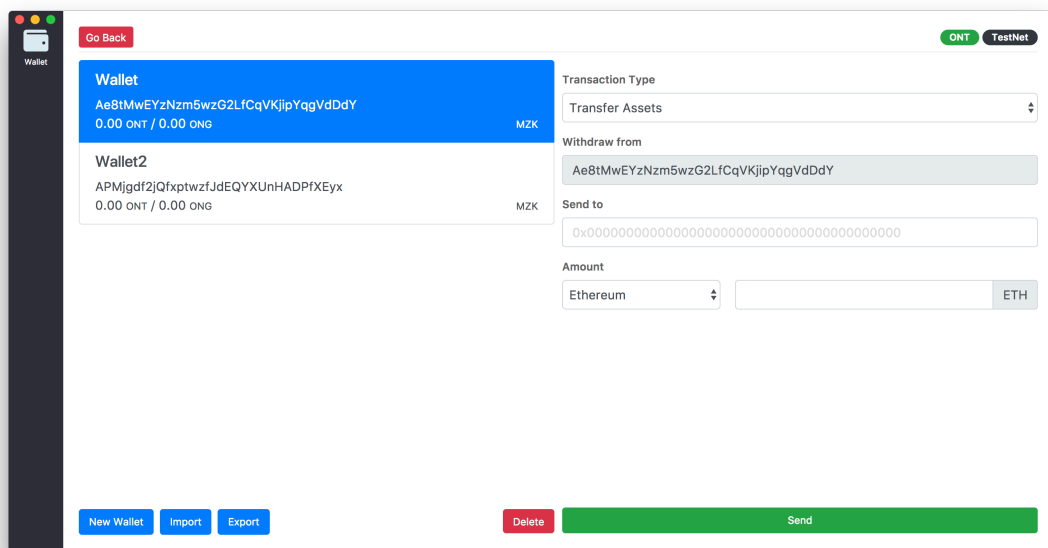

Import

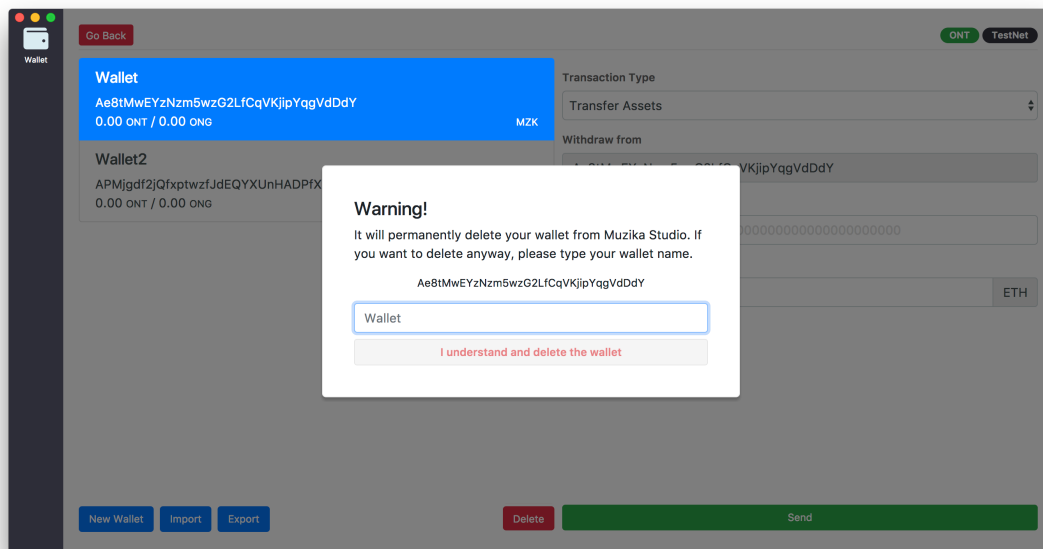

You can choose to import your existing wallet to the Muzika Studio, by creating a wallet name and providing the key file.

View your wallet list

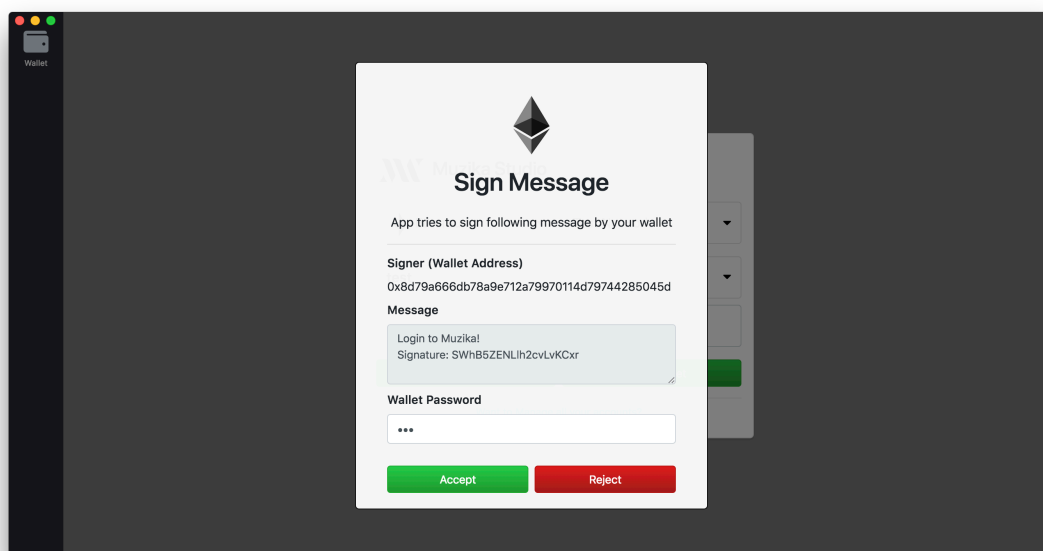

Click on the 'Want to manage all your accounts?' button to view information on all your wallets available for login. This is similar to the list of e-mail addresses in the Gmail login interface. We also support quick transfer of ETH, ONT, ONG, and MZK from your registered wallets to other addresses. When you click on the send button on the bottom right corner, you will be asked to provide your wallet password.

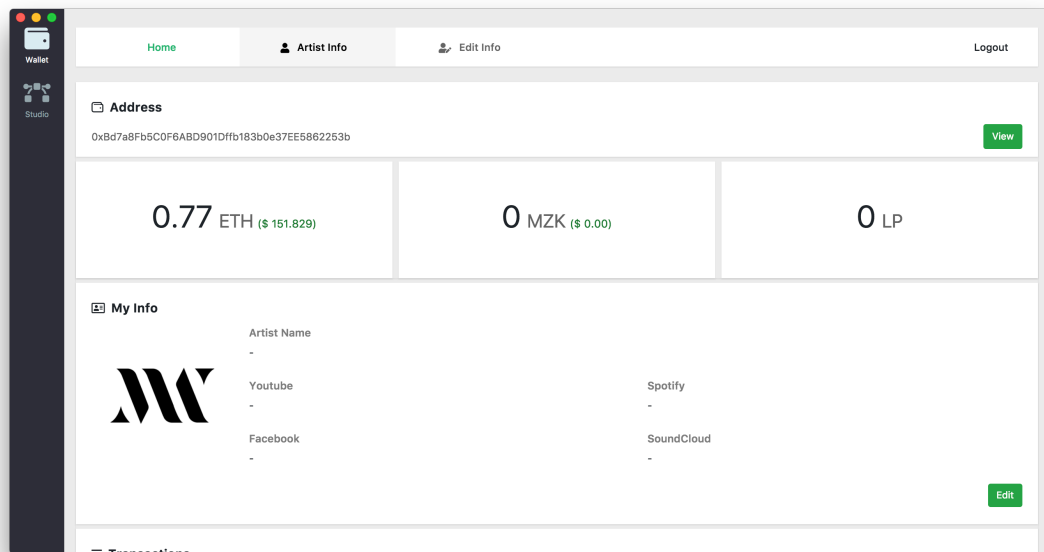

You can also delete your wallet. A warning sign will appear to when you click the 'delete' button.

When you click on the login button,

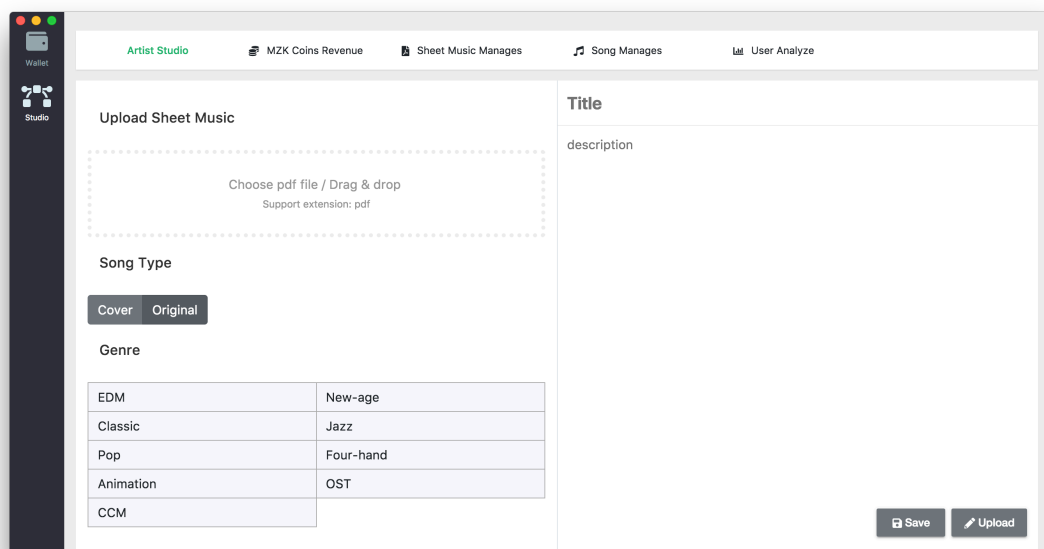

You will see the temporary message above. Click on the 'Sign' button within 5 minutes to confirm your login.

Main Interface

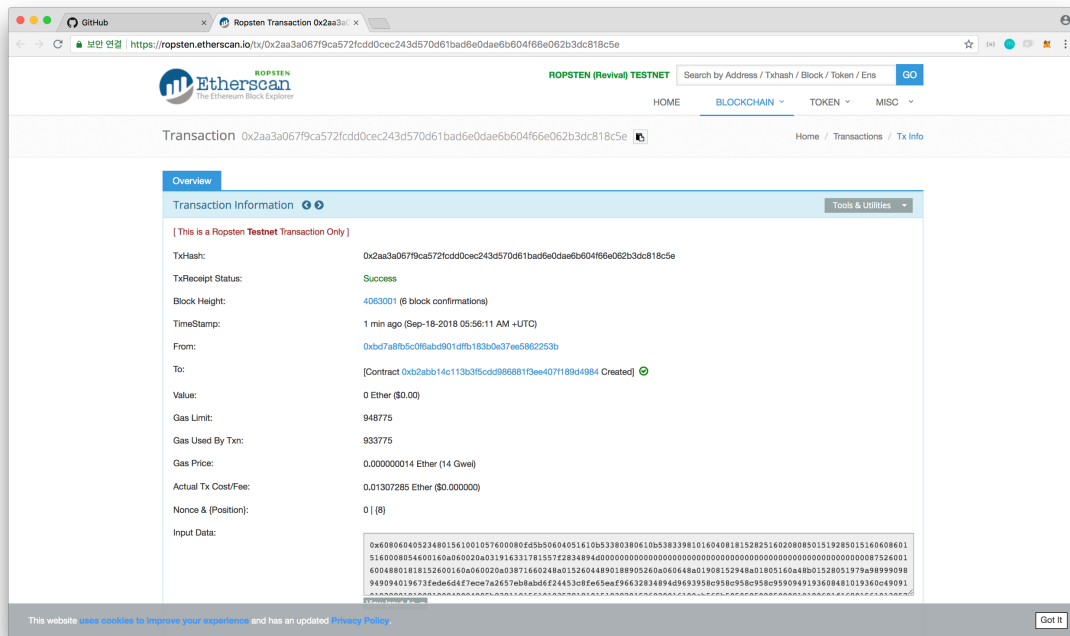

When you get logged in, you will see the main interface above. It shows your wallet address, balances, and artist information. On the top let corner, you will now see the 'Studio' icon. Click on this icon to upload your digital music products and create a Smart Contract.

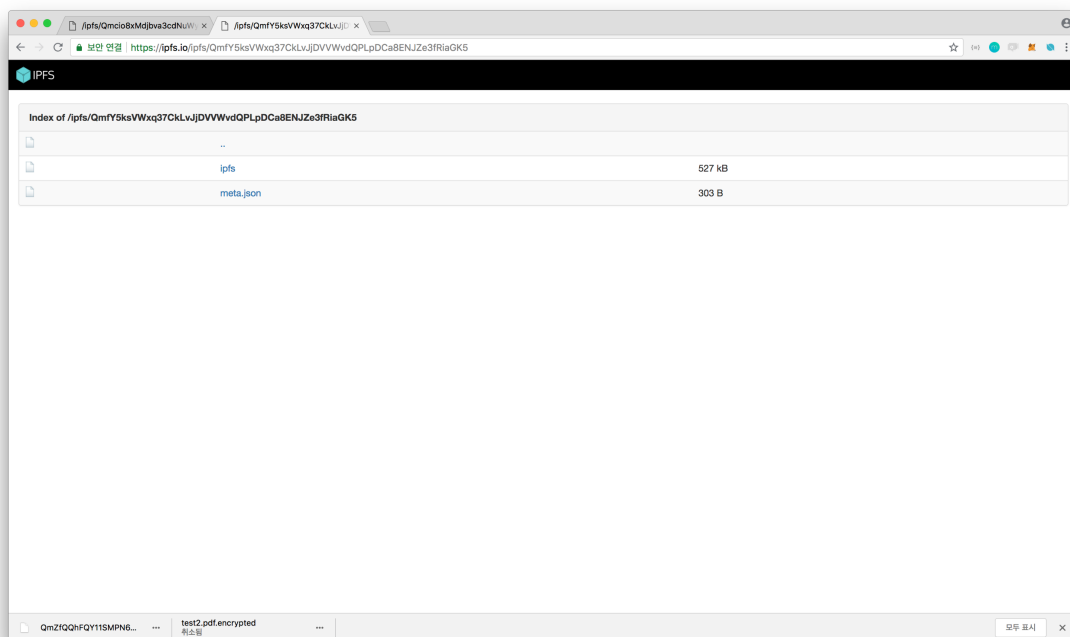

Studio

The Studio page allows you to upload your sheet music and provide further information. Note that other file types including MP3 and AVI will also be available in the official version. After putting all the information, click on the 'Upload' button at the bottom right corner to upload your file on IPFS.

You can view your transaction information on Etherscan.

Also, all files will be encrypted and uploaded to IPFS.

Functions	Ethereum	Ontology
Login	O	O
Create account	O	O
View account balance	O	O
Transfer tokens	O	X
Import / Export wallets	X	X
Artist information	O	
View total revenue/profit	X	
Main Interface	O	
Upload files on IPFS	O	
Create Smart Contract for sheet music	O	X
Create Smart Contract for sound sources	X	X
Streaming on IPFS	O	

Muzika Studio is now fully integrated with IPFS – Encrypted streaming service based on IPFS is also available. Our current development focus is on the UI/UX improvement and integration to the Ontology protocol.
